

Localscapes University

5 elements of a Localscape

Localscapes
Localscapes.com

Follow these steps to start your own plan:

What you will learn:

1. How to Create a Base map
2. Localscapes Design
 - Central Open Shapes
 - Gathering Areas
 - Activity Zones
 - Paths
 - Planting Beds
3. Plant Selection Basics
4. Plant Maintenance

Localscapes University

Creating A Base Map

Base Maps

An accurate base map is key to good design.

- Base maps should:
 - Be drawn to scale
 - Show existing hardscape
 - Show existing trees & shrubs
 - Show any permanent objects
 - Help you avoid mistakes!

Developing a Base Map

Option A:

Obtain a base map from your builder or city.

- Easiest
- May not be 100% accurate

Option B:

Measure your landscape.

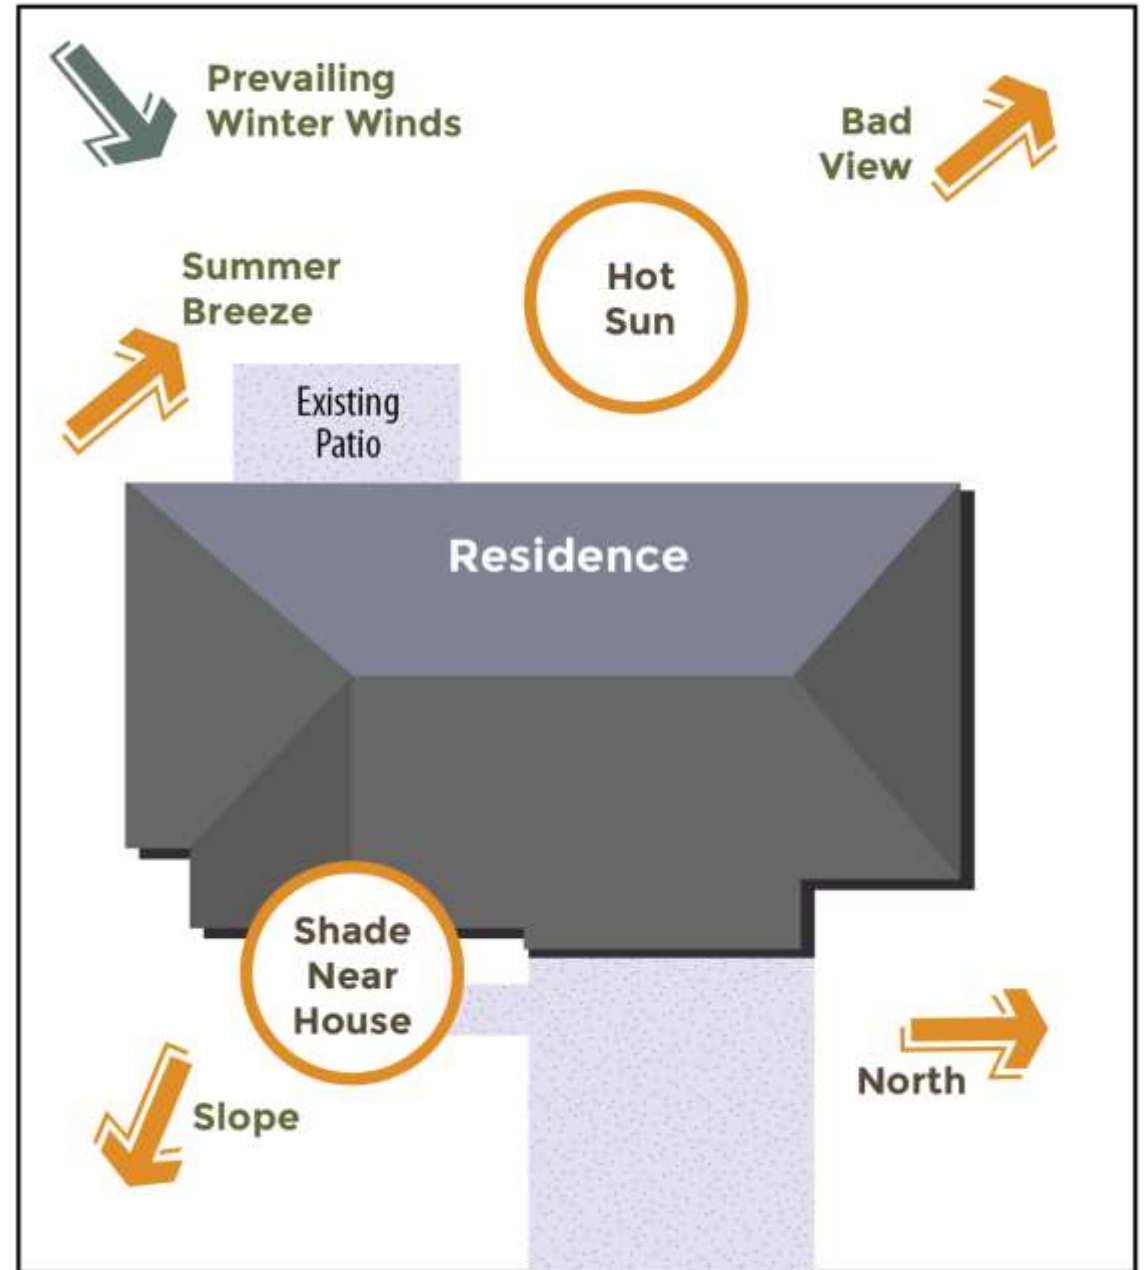

- Tape measure
- Measuring Wheel
- Google Maps

Observe & Note Conditions

- Good and bad views
- Wind
- Sun vs. Shade
- Soil conditions
- Slopes

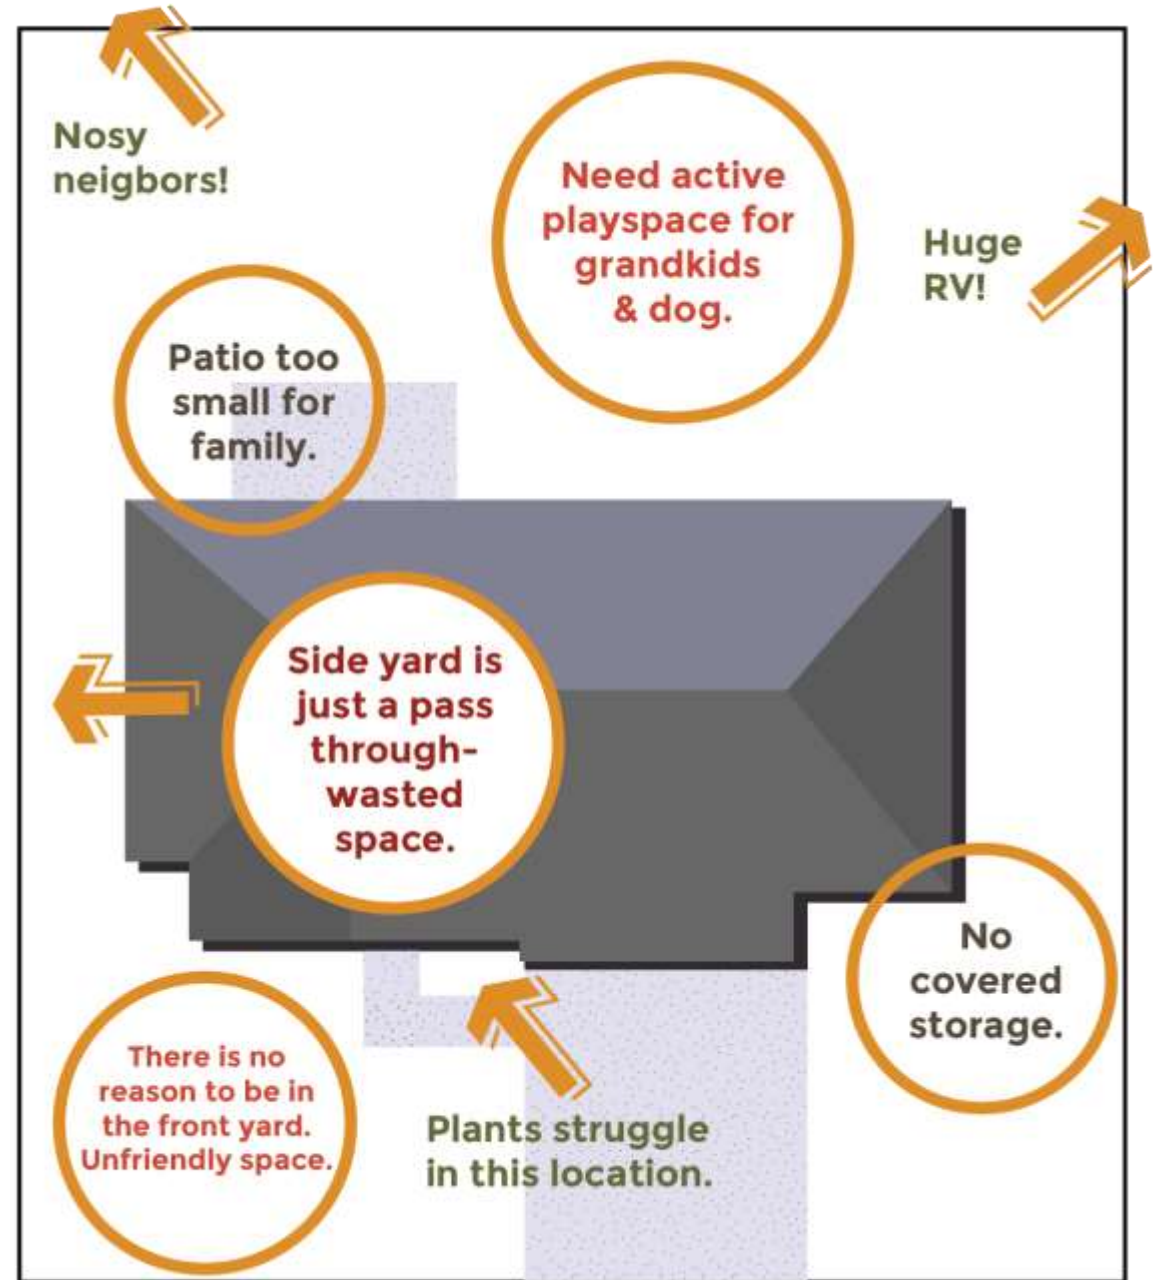

Perform a Needs Assessment

Site Concerns

- Existing patio is old and small
- Lack of privacy
- Wasted space
- Noisy areas

Wish List

- Space for shade garden
- Covered storage area (Activity Zone)
- Play space (Activity Zone)
- Fire pit (Gathering Area)
- Larger patio (Gathering Area)

Finished Base Map

- Drawn to scale
- **11" x 17" sheet of paper**
- North arrow
- All existing hardscape areas and mature trees

Creating Functional Spaces

Assess your landscape needs before determining size, type and placement for Gathering Areas, Activity Zones and Paths.

Gathering
Areas

Gathering Areas

Special spaces
designed for relaxation
or socializing

Types of Gathering Areas

- Patios
- Informal seating areas
- Covered seating
- Decks
- Gazebos
- Fire pits

Location Considerations

- Purpose
- Sun exposure
- Trees in the area
- Privacy
- Noise

Location Ideas

Best Practice:
Reserve gravel,
flagstone and
loose materials
for informal
areas

Gathering Area Materials

Best
Practice

Use flat, even
surfaces to pull
chairs in and out

Gathering Area Materials

Aggregate Calculator

These calculators are designed to give approximate amounts only. They will help you determine the quantity you need; however, variations in subgrade, compaction of subgrade, or inaccurate measurements, even a quarter of an inch, can make a difference.

Aggregate (Rock)

width	length	thickness	agg total	<input type="button" value="Calculate"/>
<input type="text"/> feet	<input type="text"/> feet	<input type="text"/> inches	<input type="text" value="0"/> tons	

Landscape Center

At our Landscape Center we have all the supplies you will need to make your yard look its best.

Rock & Sand

See our list and description of our rock and sand products.

Soil, compost, & mulch

See our list and description of our bulk garden soil, compost & mulch products.

Digout, disposal, & recycling

We are a disposal site for old asphalt, concrete, dirt, rock, cinder block, brick, sand, road base, & sod.

Asphalt

Knowing and understanding your asphalt needs, before hiring an asphalt contractor, will save you hard earned money.

Localscapes University

Maintenance

Tree Maintenance

- Prune dead, diseased, and crossing branches in early spring before leaves develop
- During dry winters and the first two years, supply extra water while root systems are still developing

Shrub Maintenance

- Remove dead branches
- Remove branches out of sidewalks and undesirable areas
- Cut off dead flowers

Ornamental Grass Maintenance

- Cut grasses back once per year, leaving 18" of the plant above ground
- Divide into four sections when the plant's center starts to die, or the plant has exceeded its available space

Perennial Plant Maintenance

Early spring:

- Use hand pruners to cut the plant back, all dead material can be removed. Leaving 2-3 inches of the plant above the ground if there is new growth from the base

Summer:

- Cut off any dead flowers or stems

Planting Bed Maintenance

- Water with drip irrigation
- Apply 3-4" of mulch
- Avoid soil compaction
- Minimize soil disruption
- Use herbicides only **AFTER** you've done the first four steps

Planting Bed Maintenance

Post-emergent Herbicide

- Glyphosate, a kill-all for weeds
- Be careful around ornamental plants

Organic version:

- Hand pulling

Skip the Weed Barrier Fabric

Lawn Maintenance

- Set your mower at 3" or highest setting
- Lawn is stressed every time it is mowed
- Taller lawn means deeper roots
- Deep roots help lawn deal with drought
- Don't bag clippings every time

Mowing Height

Both lawns received similar amounts of water but were mowed at different heights.

- South Dakota State University

Lawn Health

Short lawn allows more sunlight to hit the soil, helping weeds germinate & grow

Weed Control

Best
Practice

Apply chemicals sparingly but before weeds go to seed

Lawn Edges

Best
Practice

Scalping or
beveling of edges
leads to weeds
and unhealthy
lawn.

Edging

A clean-cut
edge
reduces
problems

Aeration

Best Practice

Core Aeration:

- removes 4-inch plugs from the lawn
- Improves water penetration
- Reduces compaction
- Should be done once per year (especially in clay soil)
- Spring is the most beneficial time to aerate

Fertilizing

Best
Practice

Nitrogen

Necessary for a healthy, dense lawn

1st

Phosphorus

Healthy root development

2nd

3rd

Potassium

Helps with drought tolerance

Fertilizing Schedule

**Best
Practice**

Fall: September-October

(Most important application of the year)

Early Spring: March-April

Late Spring: May-June

Building Planting Beds

5
Planting
Beds

3-4 Inches of mulch

Plants

Drip irrigation
below the mulch

Mulch Materials

Drip Irrigation Overview

- Allows water to flow slowly to plant roots
- Very little water is wasted from evaporation or wind
- Helps with weed control.
- Easier to install and change

Drip Irrigation Types

In-Line
Drip

Point
Source
Drip

Drip Irrigation Considerations

Choose drip irrigation that supports your plant density preference

LOW

Drip Tubing

Tee

Coupling

Elbow

Figure Eight Line
End

Staple

Inline Drip Irrigation

- Drip emitters are built directly into the lines
- Water planting beds evenly
- Installed on the surface of the soil under a layer of mulch
- Easy maintenance

Inline Drip Irrigation

To ensure trees get plenty of water, loop inline drip in at least two rings around the trunk.

Point Source Drip Irrigation Materials

Retrofit Head

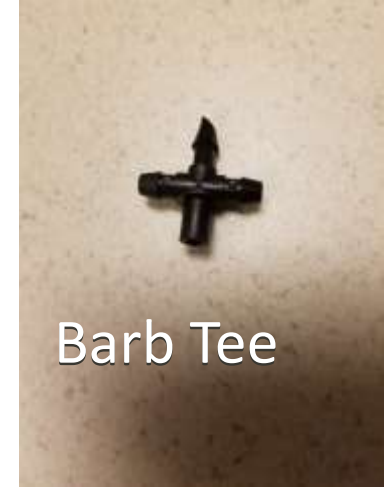

Blank Tubing

Flush Valve

Xeriman Tool

Barb Tee

Drip Emitter

Tubing Stake

Poly
Tubing

Staple

Point Source Drip Irrigation

- Drip emitters are attached to the main line with distribution tubing
- Emitter waters individual plants
- Installed on the surface of the soil under a layer of mulch
- Best for maximum weed control

Point Source Drip Irrigation

- Ensure that you have at least 5 gallons of water per hour to each tree
- More emitters will have to be added as plants mature
- Trees take the longest to establish their root system so be sure to periodically give them extra water during the first two years

Plant Materials

Trees

Shrubs

Grasses

Perennials

5 Planting
Beds

Summer

Winter

Shade

5
Planting
Beds

Use trees to provide shade for lawn, gathering areas, and activity zones

- Low-maintenance color
- Privacy
- Provide multi-season interest
- Backbone plant of any good design

'Sea of Gold'
Juniper

'Diabolo'
Ninebark

Define Space

5
Planting
Beds

Shrubs can be used
to define a space by
creating a living
fence

Ornamental Grasses

5 Planting
Beds

- Provide movement and sound
- Add light and texture
- Provide winter interest
- Habitat for birds

Alkali
Sacaton

Flame
Grass

Create Privacy

Trees, shrubs, and ornamental grasses can be used to add height and create privacy

- Provide bursts of color
- Grow year after year
- Bloom at different times of the year
- Habitat for pollinators

Dianthus

Shasta
Daisy

Planting in Layers

5
Planting
Beds

Annuals vs. Perennials

Best
Practice

Don't mix annuals
and perennials in
planting beds

Save annual
flowers for
container accents

- Keeping annuals in containers will reduce maintenance.
- Drip irrigate containers when possible.

Groundcovers

5 Planting
Beds

- The carpet of the landscape
- Living mulch
- No need to mow
- Outcompete most weeds

Creeping
Thyme
Mix

Plumbago

- Waterwise
- Provide early spring color
- A mix of bulbs provides color spring through fall
- Low maintenance

Tulips
(early
spring)

Allium
(late
spring-
summer)

Planting Times

Fall

- This is the best time to plant
- Smaller selection

Spring

- Also a good time to plant
- Selection is much greater

Summer

- Plants will struggle to develop a root system

Tree Planting

- Too high is better than too deep
- Don't cover the trunk flare
- Remove burlap and cage
- Staking is not always necessary

1. Call Before You Dig - Several days before planting, call the national 811 hotline to have underground utilities located.

2. Handle with Care - Always lift tree by the root ball. Keep roots moist until planting.

3. Digging a Proper Hole - Dig 2 to 5 times wider than the diameter of the root ball with sloping sides to allow for proper root growth.

4. Planting Depth - The trunk flare should sit slightly above ground level and the top-most roots should be buried 1 to 2 inches.

5. Filling the Hole - Backfill with native soil unless it's all clay. Tamp in soil gently to fill large air spaces.

6. Mulch - Allow 1 to 2 inch clearance between the trunk and the mulch. Mulch should be 2 to 3 inches deep.

For more tree-planting tips and information, visit arborday.org.

90075201

Watering New Plants

New plants have small root balls and **need water several times a week** (or more!) during the first growing season.

Watering Established Plants

- Plants with an established root system should be watered using drip irrigation
- Drip Irrigation needs its own zone because it runs longer than pop up heads

Clay Soil:

Water once a week for 60 minutes

Sandy Soil:

Water two days a week for 30 minutes.

Watering Guide

General Watering Guide for Central/Northern Utah

Lawns						Planting Beds						
How Often?	Clay Soil	Sandy Soil	How Long?	Clay Soil	Sandy Soil	When?	How Often?	Clay Soil	Sandy Soil	How Long?	Clay Soil	Sandy Soil
Mother's Day (start watering)	Once every 5 days	Once every 3 days	Rotating 	45 min. total	25 min. total	Before 8 am <i>or</i> After 8 pm for both lawn and planting beds.	Mother's Day (start watering)	Once every 7 days	Once every 5 days	Drip (Recommended) 	60 minutes	30 minutes
Father's Day	Once every 3 days	Once every 2 days		Fixed 	25 min. total		15 min. total	Father's Day	Once every 4 days		Once every 3 days	If you currently have spray irrigation in your planter beds, we recommend switching to drip. Drip irrigation in planting beds dramatically reduces weeds while saving water.
Labor Day	Once every 5 days	Once every 3 days	Columbus Day					Once every 7 days	Once every 5 days			
Columbus Day	Stop Watering (winterize)		Use the "cycle and soak" method for lawn. Set each zone for half the time needed, run all zones, then run each station a second time. This minimizes water runoff.			Columbus Day	Stop Watering (winterize)					

Know your plants

5 Planting Beds

Where to look:

- www.conservationgardenpark.org
- Google
- Check all plant tags before you buy a plant

What to look for:

- Size
- Light requirements
- Perennial vs. annual
- Hardiness zone

Buy plants by botanical name, not the common name.

Location Affects Plants

What is a microclimate?

- A microclimate is when the climate of a small area is different from the area around it
- Some areas of your yard may be warmer or colder, wetter or drier, or less prone to frosts
- Microclimates are very prevalent in side yards and near foundations

Full-sun plants:

Areas facing south and west are the best place for heat-loving plants.

Masonry
walls
retain
heat

Part-sun plants:

- Require 6 hours of sun or less
- East side walls are a great place for these plants. There is sunlight for half of the day, but the sun is far less intense

Shade
